Gratacon, Graphical tablet configuration tool.

Clyhtsuriva // Aimeric ADJUTOR

ABSTRACT

A tool to configure graphical tablets on Void Linux.

Gratacon

It's supposed to be a Perl project to help me get a grasp of the language but this constraint might evolve. Right now, I'm fully doing it in bash.

static_tablet-setup.sh is a script I use everytime I wanna use my H420 tablet and will be used as a guidance for the begining of this project.

I'm setting up goals through some kind of "workflow".

It's basically just the different steps from top to bottom.

- The script just does a static configuration of the HUION H420 upon it's calling.
- The script can also do it on a "CLI".
- Buttons are customizable.
- Other options too.
- Similar models works as well.
- Everything else is working (UTOPIA)
